~The invention, roughly described, comprises an application object for a synchronization system on a network coupled processing device, comprising a plurality of objects, each object translating third party data to a universal middle format, including a root object providing an entry point into individual application databases; and at least one child object; and at least one interface object. The synchronization system is useful in maintaining matching records and data for a user across multiple network coupled devices.

In a further embodiment, an application object on a server coupled to a network, comprises an application data function call interpreter. The interpreter is accessible to a synchronization engine and an application running on a network coupled device having user data; and a universal data record mapping formatter.
